NavCom Defense Electronics, Inc. Announces Sale of its Corona, California Operations to Extant Aerospace

Corona, California October 1, 2018 – NavCom Defense Electronics, Inc. (NavCom), a leader in the development, manufacture, and support of high reliability mission critical aerospace electronics and avionics systems, announced today that it has completed the sale of substantially all of the assets and technical data rights of its Corona, California operations to Extant Aerospace (Extant), based in Melbourne, Florida.

NavCom will retain its operations at the Warner Robins, Georgia facility and will continue to perform on its current contracts at the Corona facility until they transition to Extant.

“We have known Extant’s leadership for some time and have watched with great respect as they’ve successfully executed and grown their business for sustaining legacy aerospace electronics and avionics systems” said NavCom President and CEO C.C. “Skip” Christ. “Jim Gerwien, President of Extant Aerospace and his team have done a great job of developing a comprehensive support structure designed to address the sustainment challenges of both manufacturing and repairing such products. We believe Extant is the best choice to maintain our commitment for the long-term support of NavCom’s products to the U.S. DoD, the OEMs, and our global customer base.”
